

Things Family Caregivers Need to Know About COVID-19 for Caring for Someone With Dementia or Alzheimer's Disease:

- **Dementia's don't make someone get COVID-19 any easier than others**
- **Being a senior over age 60 is a risk factor**
- **If those with Alzheimer's/dementia do get COVID-19, they may not be able to communicate symptoms, such as fever and may be more confused**
- **Most importantly, have a back-up plan for someone to care for your loved on in case you get the virus**
